

Capiflow

Invoice Bundles — User Guide

A simple guide to grouping invoices, reviewing their numbers, and exporting them to Excel.

Prepared by MountSol

1. Where to find Capiflow

Open the **Capiflow** app from the main apps screen.

Click **Bundles** to see all your bundles, then **New** to create one.

2. The Bundle screen

Give the bundle a name and add invoices in the **Invoices** tab (manually, or with **Load Invoices**).

The totals and the **Financials** tab update automatically.

3. The buttons

Button	What it does
Load Invoices	Adds many matching invoices at once using filters (Draft only).
Confirm	Locks the bundle and turns on the Export button (Draft only).
Set to Draft	Unlocks a confirmed bundle so you can edit it again.
Export to Excel	Downloads the bundle as an Excel file (after Confirm).

4. Load Invoices

Choose any filters (customer, payment term, date range) and click **Load** to pull all matching invoices in at once.

5. Confirm & Export

After **Confirm**, the bundle locks and the **Export to Excel** button appears. Use **Set to Draft** if you need to edit again.

6. The Excel file

Two sheets: **Bundle** (summary, invoices, financials) and **Schedule** (the installment timeline). The four top boxes are colour-coded — **Late**, **Residual**, **Paid**, **Contract value**.
